Released July 2017

PRESS RELEASE

We Have Obtained Exclusive Marketing Rights from the American IOT Company

Wynd Technologies, Inc.

Sales of Wynd, the Smartest Air Purifier will Begin at the end of September!

Y4.com Co., Ltd. (Headquarters: Chuo Ward, Fukuoka City, President: Ryohei Sato, hereinafter: Y4.com) has concluded an exclusive marketing rights agreement for Japan with Wynd Technologies, Inc. (hereinafter: Wynd), an American IOT company that developed Wynd, an air purifier device through a 600,000 dollar crowdfunding project at the crowdfunding site Kickstarter.

■ About Wynd

Wynd creates a clean air bubble around you by removing dust, allergens, smoke, and pollutants from your personal space. Because it filters harmful particles from the air around you, Wynd helps you breathe clean air and makes you feel refreshed.

Wynd is not merely an air purifier - it is a portable, personal air purifier with an intelligent air quality system. It is the same size as a water bottle, making it easy to use in all kinds of places such as offices, hotels,

cars, and in public transportation.

In a semi-enclosed environment such as a stroller, Wynd in a Wynd stroller holder can reduce PM 2.5 (fine) particles by over 50%, and PM 10 (coarse) particles by over 70%.

■ Tracker and Purifier

The tracker continuously monitors, detects, and gives alerts on the levels of fine particle pollution from sources of pollution such as allergens, cigarette smoke, bacteria, mold spores, and smog. The filter usually lasts 3 months in a polluted environment (with an average AQI of 200). In environments with little pollution, the filter lasts from 3 months to 1 year. Filter replacement is automated - by tracking the pollution level, airflow level, and usage duration, the device will tell you how much of the filter is used up, and notify you when it is time to replace the filter.

■ Checking Air Quality

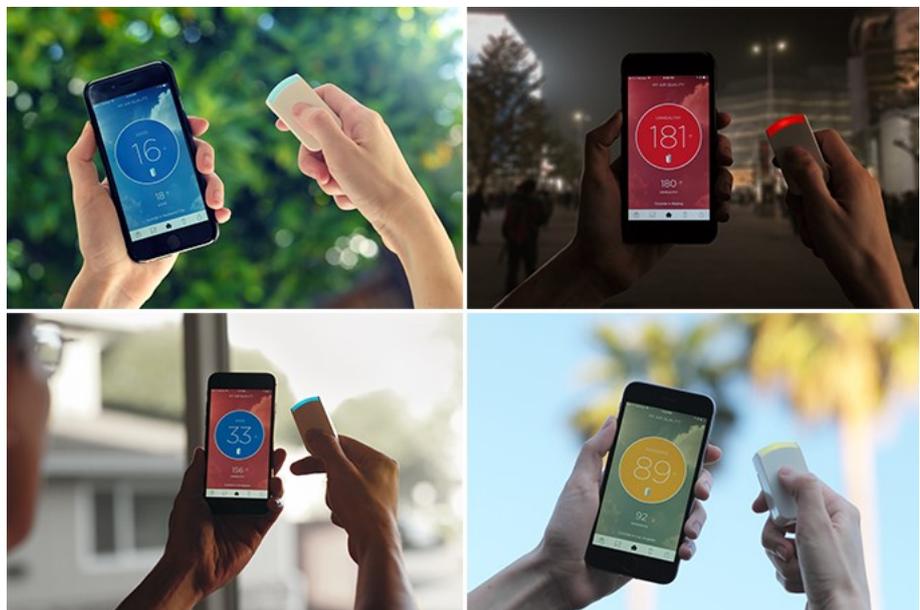

トラッカーの明るい色は、空気の健康状態を示します。
The tracker's bright colors display how healthy the air is.

今後も、国内外の優れた独占販売可能な I O T ×ヘルスケア商品を、国内主要キャリアのマーケットに向けて、必要に応じてローカライズ、カスタマイズして販売を行っていきます。

We at Y4.com will continue to localize / customize (as needed) and sell premium domestic and foreign IOT-health care products that can be sold exclusively for the domestic major carrier market.

■ About Wynd Technologies, Inc.

Wynd was established in September 2014 with a team composed of MIT engineers, experienced

designers, and a rocket scientist. Noting that air pollution in Asia is a problem that affects the entire world, they developed Wynd to resolve allergens, germs, and smog. Forty prototypes were developed, and these were distributed from the USA to Israel, to Nepal, and to China.

Wynd launched its Kickstarter project in June 2016 toward development, and it achieved its funding goal of 600,000 dollars.

Y4.com Co., Ltd. Company Overview

Y4.com Co., Ltd. was established in 2012 as a B2C application distribution service company. We are now offering IOT application services and health care products for B2B.
