

NEWS RELEASE

Delivered in April, 2018

We initiated a project of "EcoQube Air" which grows a plant and purifies air in the cloud funding "Makuake"!

Y4.com (headquartered in Chuo-ku, Fukuoka, represented by the director Yukinao Ajima) has initiated a marketing project of "EcoQube Air" which not only grows a plant indoors regardless of the season but also purifies indoor air and provides clean air in the cloud funding "Makuake"!

We will raise fund from April 3^{rd} to May 4^{th} with the target of 300,000 yen and will conduct PR activities for the Japanese market when our target is reached.

Visit our project:

[What is EcoQube Air?]

EcoQube Air circulates air with two fans and provides Co2 to a plant. We introduced 3-step filtration process in EcoQube Air's filter system, where the mechanical filter eliminates dust, pollen and fungus from air and the activated filter catches harmful chemical substances. Furthermore, a plant filtrates air and emits oxygen, which makes the air of the room circulate.

This is also a revolutionary hydroponic-culture greenhouse which provides sunlight, water needed to grow a plant automatically by the latest technology system.

EcoQube Air is programmed to create light of proper volume at a proper time.

It can grow a plant by scheduling exactly proper volume of light needed by a plant.

<What is Cloud Funding "Makuake"?>

This is a cloud funding website which is managed by Cyber Agent Inc., Cloud Funding. This is a buying-and-selling type cloud funding. When it gains 100% funds, a project will be conducted.

<Company Outline of Y4.com>

Y4.com was founded as a company dealing with B2C application delivery service business in 2012 and has provided IOT application service and healthcare products to B2B since then.
